

DATA HANDLING USING 'Pandas' and DATA VISUALIZATION USING 'Seaborn'

Using the pandas function read_csv(), read the given 'iris' data set.

1. Use appropriate functions in pandas to display
 - (i) Shape of the data set
 - (ii) First 5 and last five rows of data set(head and tail)
 - (iii) Size of dataset
 - (iv) No:of samples available for each variety
 - (v) Description of the data set(use describe

CODE

```
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
import pandas as pd
col=['sepal_length','sepal_width','petal_length','petal_width','type']
iris=pd.read_csv("iris.csv",names=col)
print("First five rows")
print(iris.head())
print("*****")
print("Last five rows")
print(iris.tail())
print("*****")
print("shape:",iris.shape)
print("*****")
print("Size:",iris.size)
print("*****")
print("no of samples available for each type")
print(iris["type"].value_counts())
print("*****")
print(iris.describe())
```

OUTPUT

```

First five rows
  sepal_length sepal_width petal_length petal_width  type
0 sepal.length sepal.width petal.length petal.width variety
1          5.1          3.5          1.4          .2  Setosa
2          4.9           3          1.4          .2  Setosa
3          4.7          3.2          1.3          .2  Setosa
4          4.6          3.1          1.5          .2  Setosa
*****
Last five rows
  sepal_length sepal_width petal_length petal_width  type
146          6.7           3          5.2          2.3  Virginica
147          6.3          2.5           5          1.9  Virginica
148          6.5           3          5.2           2  Virginica
149          6.2          3.4          5.4          2.3  Virginica
150          5.9           3          5.1          1.8  Virginica
*****
shape: (151, 5)
*****
Size: 755
*****
no of samples available for each type
Setosa      50
Versicolor  50
Virginica    50
variety      1
Name: type, dtype: int64
*****
  sepal_length sepal_width petal_length petal_width  type
count          151          151          151          151          151
unique           36           24           44           23           4
top              5            3           1.5           .2  Setosa
freq            10           26           13           29          50

```

2. Use `pairplot()` function to display pairwise relationships between attributes. Try different kind of plots `{'scatter', 'kde', 'hist', 'reg'}` and different kind of markers

CODE

```

import matplotlib.pyplot as plt

%matplotlib inline

iris = sns.load_dataset('iris')

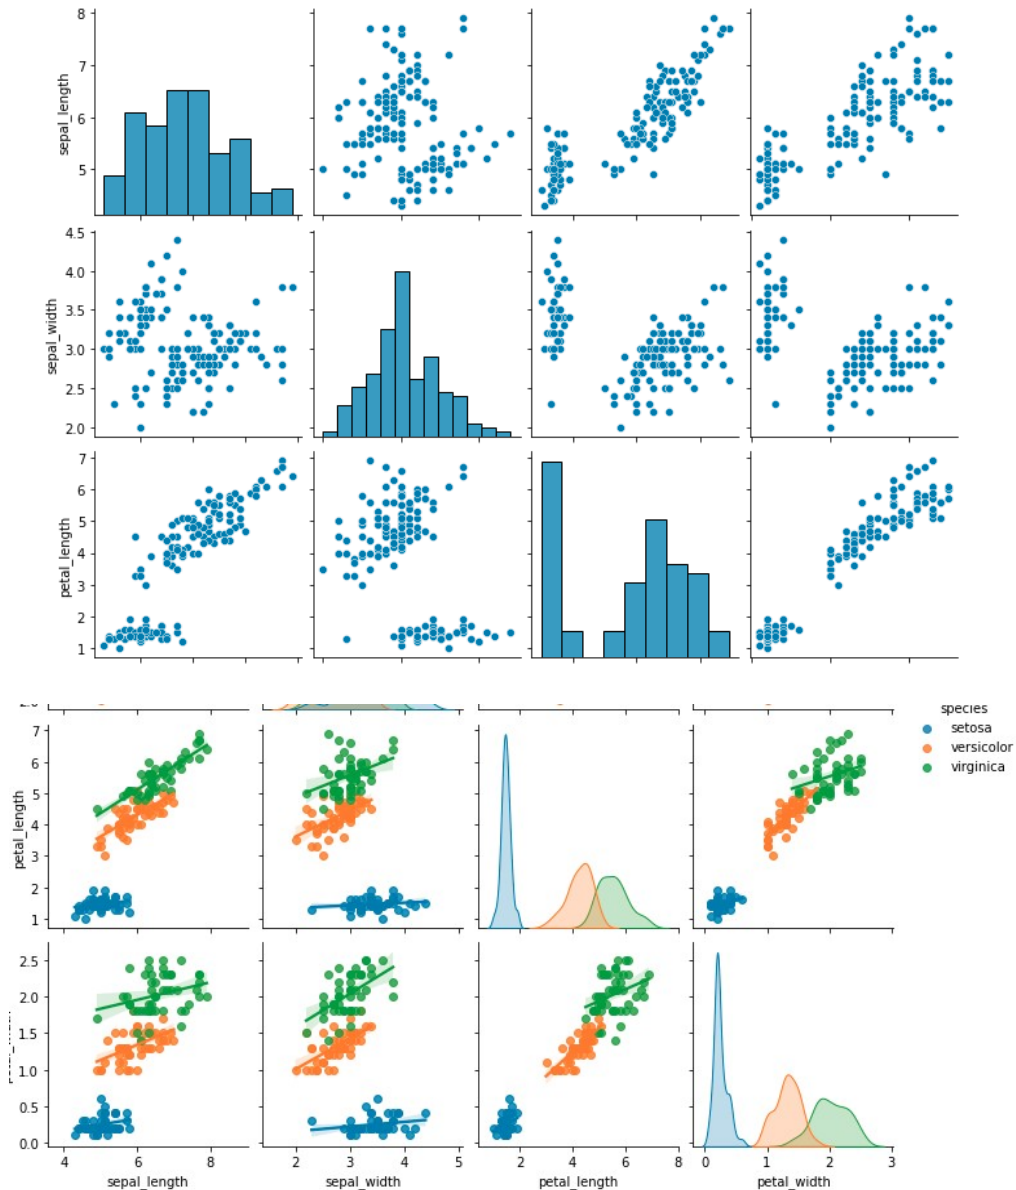

my_data_frame = pd.DataFrame(iris)

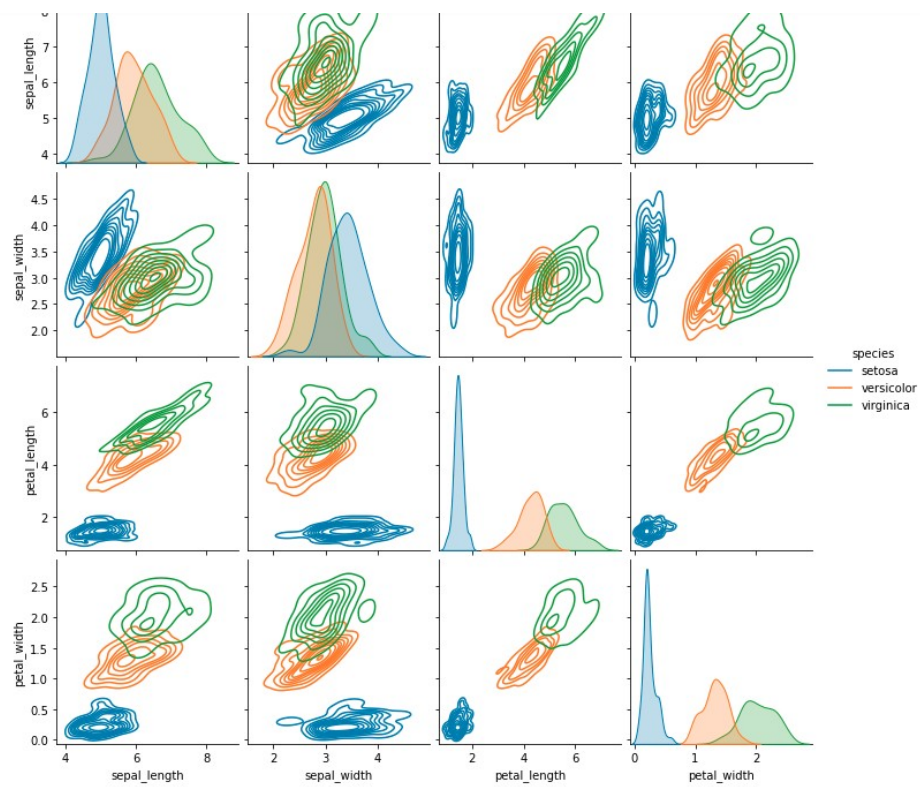

g = sns.pairplot(my_data_frame)

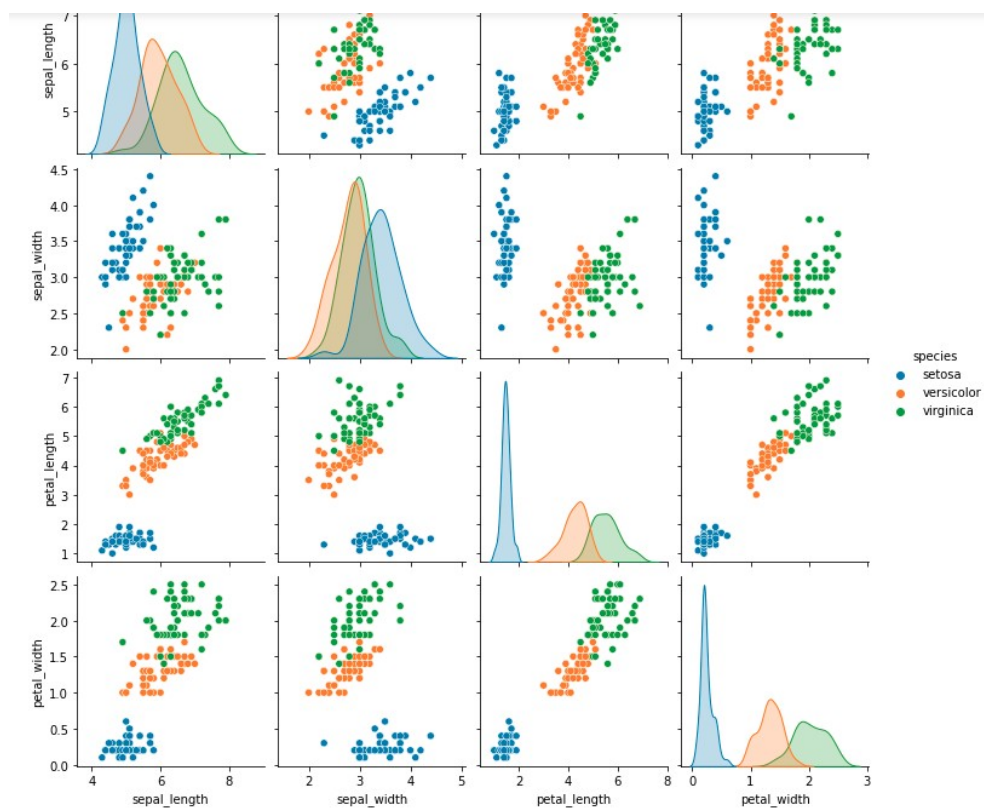

```

```
g = sns.pairplot(iris, kind="reg", hue="species")
g = sns.pairplot(iris, kind="hist", hue="species")
g = sns.pairplot(iris, kind="kde", hue="species")
g = sns.pairplot(iris, kind="scatter", hue="species")
```

OUTPUT

3. using the iris data set,get familiarize with functions:

- 1)displot()
- 2) histplot()
- 3) relplot()

CODE

```
sns.displot(data=iris)
sns.histplot(data=iris)
sns.relplot(data=iris)
```

OUTPUT

```
sns.histplot(data=iris)
```

```
<AxesSubplot:ylabel='Count'>
```

```
sns.displot(data=iris)
```

```
<seaborn.axisgrid.FacetGrid at 0x7fe3290bca00>
```

```
sns.relplot(data=iris)
```

```
<seaborn.axisgrid.FacetGrid at 0x7fe32d2cf130>
```

OR

```
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
import pandas as pd
col=['sepal_length','sepal_
df = sns.load_dataset('iris')
df.head()
sns.displot(x = 'petal_length',kde=True,bins = 5 , data =df)
```

```
import seaborn as sns
sns.set(style ="ticks")
dataset = sns.load_dataset('iris')
col=['sepal_length','sepal_
sns.relplot(x ="sepal_length", y ="petal_width", data = dataset)
```

```
import numpy as np
import pandas as pd
import seaborn as sns
# Load dataset
dataset = sns.load_dataset("iris")
```

```
# Plot histogram  
sns.histplot(data = dataset, x = "sepal_length", kde = True)
```
